

PRODUCT WITH PICS	PRODUCT DESCRIPTION	TYPICAL USE	FEATURES	BENEFITS	APPLICATION BY
	CORROSION^X - Thin oil - Penetrant - Lubricant - Corrosion inhibitor	- Loosening rusted connections - Waterproofing electronics/electronics - Switches, connectors - Spare part storage indoors - Rust remover	- Superfast penetrant - Ultra thin coating - Excellent lubrication - Applicable over wet & already corroded parts and electronics - Dielectric strength over 35,000 Volts	- Extremely cost efficient due to coverage 94m²/ltr - Never dries, never gunks up - Does not attract dust - Applicable over wet and already corroded parts	- Aerosol - Trigger bottle - Wash down gun - Sprayer (60psi) - Brush/Wipe/Dip
	CORROSION^X XD - Medium thin oil - Allrounder - Penetrant/lubricant - Corrosion inhibitor	- Chassis protection - Waterproofing outdoor electronics - Chain lube - Steel piping - Rustproof booms - Spare part storage, exposed areas	- Fast penetrant - Extended longevity in chassis - Withstands wash off - Applicable by sprayer to large roofs/barges/trucks - Dielectric strength over 32,000 Volts	- Added longevity 70m²/ltr - Superb lube (0.4mm wear scar) - Minimal dust attraction - Safe on all electronics	- Aerosol - Trigger bottle - Wash down gun - Commercial sprayer - Brush/Wipe/Dip
	CORROSION^X HD - Thickish oil and corrosion protection in extreme climate/exposure - For lubrication of exposed mechanics	- Leaf spring - Slew-rings - Steel wires - Chain drives - Submerged electrics - Bolts/hinges - Assembly compound	- Very resistant to wash off - Best lube on dry steel wire - Penetrates into chain links and wires - Stops galling and electrolysis - Dielectric strength over 25,000 Volts	- Perfect lube & protection on parts exposed to weather, chemicals and impact - No prep needed - Never gunks - Applicable over wet and already corroded parts	- Aerosol - Trigger bottle - Wash down gun - Commercial sprayer - Brush/Wipe/"Viper" applicator
	CORROSION^X GREASE - Marine grease NLGI #2 grade - Bearing grease - High performance/High temp - High speed capable - Excellent corrosion inhibitor	- Steel wire ropes - Bolts/hinges - Bearings - Marine & Mining - Heavy machinery	- Capable at high speed/temperature/impact - Very high load 620kgs weld point - VIPER approved - Steel wire rope	- Extended service intervals - Less wear & tear - Minimised labour cost - Lower "cost of ownership"	"Viper" or other grease applicator - Grease gun 400cc capable - Stiff brush - Wipe
	RUST RECONVERTER PAINT - Water based paint - Applicable to rusty steel - Turns black and shiny - Commercial grade - Acid free	- All chassis, cars, trailers - Booms - Steel structures - Steel hull ships	1 ltr for 11m². No smell, fast dry - Compatible with all paints - Works on galvanised surface - Commercial grade product	- Longer lasting. Better compatible - No sanding between coats - No prep other than degrease & descale loose flakes - No fumes, safe in "confined space" - Water based	- Dip/Brush - Airless or standard paint sprayer - Electric sprayer (0.8mm nozzle) - Nero-Gun/Wash down gun
	XTREME CLEAN - Degreaser/Cleaner - Concentrate - Concrete/lime dust remover	- On all machines, tools, ships, engines and bearings - Gen sets - Chain drives - Steel wire rope - Concrete Trucks	- Fast removal of dirt, grime, soot, oil stains, Corrosion X, concrete & lime dust - Biodegradable - Non-flammable	- High concentration allows mix with up to 30 parts water - Very low environmental impact - Safe on paint, plastics, around animals & farm equipment	- Brush - Spray - Trigger bottle - Foamer - Bath

Crane Info

CorrosionX – products general

They are corrosion stoppers, lubricants, penetrants and electronic waterproofers all at the same time. The products are non-flammable (apart from the LPG part when packaged as aerosol). They are applicable over any metal, even if it's already wet or corroded. As a lubricant it is about twice as good as PTFE. You can weld over it. CorrosionX typically tests to over 35.000 volt dielectric strength. Totally safe on rubber, neoprene, all plastics, PCB's, all electronics, paint. Does not go through skin, extremely low tox, classed by NZ MPI as C11, same as Lanolin.

1ltr CorrosionX coats 94 sqmtr and as corrosion stopper it outruns pretty much anything else on the market. Those two factors make it very cost efficient.

CorrosionX – red labels, cans

This your fastest penetrant to get rusty bolts out. It is also a waterproofing agent for electronics, safe on fuse boxes to 39.000 volt, contacts, motherboards, PCB's, switches. Can be applied without cleaning and preparation over already wet and already corroded terminals, PCB's and switches to make them go again. Apply a drop of CorrosionX from a spray can or a trigger bottle preferably the day before you want the fastener apart. Give it a dong or two on the head so the vibration helps to make the CX penetrate. Dismantling gear that

way is a LOT easier. Standard CorrosionX will keep the rust off your spare parts, tools and high tensile bolts, lubricate pliers, hinges and wrenches long term.

CorrosionX Heavy Duty – green labels and cans

Superb assembly compound for bolts, axles, sheaves, spacers. Outperforming Tefgel, Rescue Steel, Duralac etc. in lubrication (to stop galling), as lubricant (to read true torque) and to stop rust and electrolysis inside assemblies.

As rust prevention on those big rollers and axles I suggest you brush or spray on a thin coating of CX HD after the rolls have been cleaned and de rusted. That will stop the rust from developing for years.

CX HD shows excellent results as lubricant on "dry" steel wire ropes.

CorrosionX – Xtreme Clean

To degrease previously CorrosionX coated areas (i.e. if you want to paint them later), use Xtreme Clean. Comes in half litre trigger bottles, 1 gallon and 5 gallon packs. It's a concentrate and you rarely need it neat at full strength. Mostly used with 1 part product mixed with 10 parts water, making it very economical. Not flammable, water based, biodegradable, will not crack the skin on your hands like thinner based degreasers do. Perfect

to get CorrosionX off again at the other end of shipping parts.

CorrosionX – Grease

Not only a very good marine grade grease, but a rust stopper, too. About twice the load capacity of a good molycode grease. NZ MPI approved to same tox class as Lanolin. High drop point of 275 degrees. High speed and high pressure capable with very high shock load capacity. 15oz cartridges and 5 gallon buckets available. This is what most ports now run on the hoist and luff wires of their container bridges.

Rustreconverter LT

While most Rustreconverters look the same and basically work on the same principle, you get what you pay for. CorrosionX Rustreconverter is a pure commercial grade version, therefore preferred by clients exposed to extreme conditions. Our version can be applied to still rusty surfaces (must be degreased). You can apply another coat or a top coat without sanding/scuffing between the coats. Waterbased, so all tools can be cleaned under the tap. Compatible with ALL other paints/top coats while most other rustreconverters are very restricted to compatibility with certain paints only. Very scratch resistant. No need for a stain blocker. 1 ltr covers around 11 sqmtr in two coats
